Institute for IT 2018

What is a Business?

A business is a legally recognized organization designed to provide goods or services, or both, to consumers, businesses and governmental entities.

problem

NAVIGATING PROJECT REALITIES

- Only a minority of projects are completed on time and within budget.
- A significant portion of project conflicts can be attributed to requirement errors.
- Identifying and rectifying requirement errors accounts for the majority of project rework costs.
- On average, projects surpass their planned time schedule by a substantial amount.
- More than half of projects end up costing nearly double of their initial estimate.
- Approximately 30% of projects face cancellation before reaching completion.

What is Business Analysis?

Business Analysis is the practice of enabling change in an organizational context, by defining needs and recommending solutions that deliver value to stakeholders.

Stakeholders are like people or groups who care about something, like a project or a business. They could be customers who use the product, workers in the company, or even the government that makes rules. Investors who put money in, suppliers who give things, and the community around the place are also stakeholders.

Why we need Business Analysis?

- **Understanding Business Needs:** Business Analysis helps in identifying and understanding the actual needs and challenges faced by an organization. This ensures that any proposed changes or solutions are addressing real problems.
- **Defining Clear Objectives:** It helps in setting clear and achievable objectives for projects or initiatives, aligning them with the overall goals of the organization. This clarity reduces ambiguity and guides decision-making.
- **Efficient Resource Allocation:** By analyzing business processes, Business Analysis helps in identifying areas where resources can be utilized more efficiently. This includes optimizing workflows, reducing costs, and improving productivity.

Why we need Business Analysis?

- **Minimizing Risks:** Business Analysis involves assessing potential risks and challenges associated with proposed changes. This proactive approach allows organizations to develop strategies for risk mitigation and contingency planning.
- **Ensuring Stakeholder Satisfaction:** By involving key stakeholders in the analysis process, Business Analysis helps in understanding their needs and expectations. This ensures that the final solutions meet stakeholder requirements and contribute to overall satisfaction.
- **Increasing Competitiveness:** Organizations that effectively apply Business Analysis can adapt to market changes, technological advancements, and customer demands more efficiently. This adaptability enhances competitiveness in the business landscape.

Business Analyst

- A Business Analyst (BA) is a professional who works within an organization to identify business needs, analyze and document requirements, and recommend effective solutions to enhance the overall functioning of the business.
- Business Analysts act as a bridge between business stakeholders and technology teams, ensuring that proposed solutions align with business objectives and can be successfully implemented

Role of the Business Analyst

Business Change Lifecycle
