RECOMMENDED TEXTBOOKS

“Business Analysis (4th Edition)” by “ Debra Paul, James Cadle”
Publisher: BCS, The Chartered Institute for IT 2020

“Business Analyst” by “Adrian Reed “ Publisher: BCS, The Chartered
Institute for IT 2018

Mission Statement

To bring the best user experience to customers through innovative hardware, software, and services.

Vision Statement

To make the best products on earth and to leave the world better than we found it.

Vision & Scope Document

- What is it?
- Why do you need it?
- What does it contain?

Vision & Scope Document

Definition

The **Vision and Scope Document** is a foundational document in project management that **outlines the project's purpose, objectives, and parameters.**

It provides a clear vision of what the project aims to achieve and the scope of work involved.

Need for vision and scope doc

- **Outlining Objectives**

The Vision and Scope Document clarifies the project's objectives, ensuring alignment among stakeholders and the project team.

- **Defining Deliverables**

By detailing the project's deliverables, the document provides a roadmap for the project team, guiding their efforts throughout the project lifecycle.

- **Identifying Constraints**

The document highlights constraints such as budgetary limitations, time constraints, and resource availability, enabling stakeholders to manage expectations and make informed decisions.

Project Vision Diagram

Vision and Scope Document

1. Business Requirements

- 1.1 Background
- 1.2 Business Opportunity
- 1.3 Business objectives and Success Criteria
- 1.4 Customer or Market Needs
- 1.5 Business Risks

2. Vision of the Solution

- 2.1 Vision Statement
- 2.2 Major Features
- 2.3 Assumptions and Dependencies

3. Scope and Limitations

- 3.1 Scope of Initial Release
- 3.2 Scope of Subsequent Releases
- 3.3 Limitations and Exclusions

4. Business Context

- 4.1 Stakeholder Profiles
- 4.2 Project Priorities
- 4.3 Operating Environment

Using a example write down the key components of a Vision and Scope Document, and why is it important to have a well-defined Vision and Scope Document in project management?

Key Components of a Vision and Scope Document

Project Overview - Quick summary of what the project is about.

Scope Statement - What's included and what's not in the project.

Objectives and Goals - What the project aims to achieve.

Deliverables - What the project will produce or deliver.

Constraints and Assumptions - Things that might limit the project or assumptions made.

Stakeholder Requirements - What stakeholders want or need from the project.

Success Criteria - How we'll know if the project is successful.

Importance of a Well-Defined Vision and Scope Document

- Clarity and Alignment
- Scope Management
- Risk Mitigation
- Resource Allocation
- Communication and Collaboration

Stakeholders

People who have a key interest in the business

Stakeholders

Control And Influence

- Stakeholders can exert control or influence decisions.
- The degree of the influence or the level of control will vary depending on how much they are involved or interested in the company.

Aims of Stakeholders

Shareholders – will be interested in healthy profits so they will receive a high dividend and a high value of their shares

Managers – will want promotion and growth to ensure their own job security

Employees – will be concerned about pay levels, working conditions and job security

Suppliers – will want to get regular orders with prompt payment after a brief period of credit

Customers – will want low prices, high quality and good after sales service

Influence of Stakeholders on Organizations

Shareholders – have voting rights at AGM's of limited companies

Managers – have day to day decision making powers

Employees – may take industrial action or strike to persuade the firm to do what they want

Suppliers – can vary the credit period and level of discounts offered to the firm

Customers – influence firms by buying, refusing to buy their goods or services.

Banks – have the power to grant or withhold loans and to set the level of interest to be paid back

The Government – can introduce laws to make firms carry out its wishes

Stakeholder Conflict

Different stakeholders may have different aims for the organisation

Requirements

- A statement that describes what a project or system needs to achieve or do.
- It's like a list of things that must be done or included to make sure the project meets its goals.
- Requirements help everyone involved understand what needs to be done and guide the project from start to finish

Types Requirements

- **Functional Requirements** - These describe what the system should do, such as features, capabilities, and actions.
- **Non-functional Requirements** - These specify how the system should perform, including qualities like performance, reliability, and security.

Using a example illustrate functional and non-functional requirements

Why Requirements Are Important

Understanding - Requirements help everyone know what needs to be done for the project.

Guidance - They show the way for building the project and help decide what to do first.

Preventing Problems - Clear requirements stop the project from getting too big or changing too much.

Managing Risks - They help see problems early so they can be fixed before they become big issues.

Quality Control - Requirements make sure the project turns out the way people want it to.

Teamwork - They make sure everyone involved knows what to do and can work together smoothly

Business Analysis Plan

- Business analysis plan is a roadmap for how a business analyst will approach and complete a project.
- It is one of the key knowledge areas of the BABOK guide.

Different Aspects Of The Business Analysis Plan

- Plan Business Analysis Approach
- Plan Stakeholder Engagement
- Plan Business Analysis Governance
- Plan Business Analysis Information Management
- Identify Business Analysis Performance Improvements

Plan Business Analysis Approach

Plan Business Analysis Approach

- Defines the methods that will be used throughout the project.
- It also determines the timeline of the project, what deliverables are expected, and which techniques will be used.

Plan Stakeholder Engagement

- This task involves identifying all of the stakeholders who are involved in the project and understanding their needs.
- It also defines how the business analyst will communicate with stakeholders throughout the project.

Plan Business Analysis Approach

Plan Business Analysis Governance

- Defines how decisions will be made on the project. It also identifies the roles and responsibilities of all of the decision-makers.

Plan Business Analysis Information Management

- Defines how information will be collected, stored, and accessed throughout the project.

Identify Business Analysis Performance Improvements

- Involves monitoring the performance of the business analysis work and identifying areas where improvements can be made.

THANK YOU !
