

Job Design and Job Analysis and Human Resource Planning

K.K.N.B. Adikaram
Department of Multidisciplinary Studies
Faculty of Technology
University of Ruhuna

Date: 10.02.2025

Learning outcomes

- Understand the process of organizational Human Resource Planning.
- Identify key concepts of Human Resource Planning.
- Learn on organization's job design, job analysis and human resource planning.

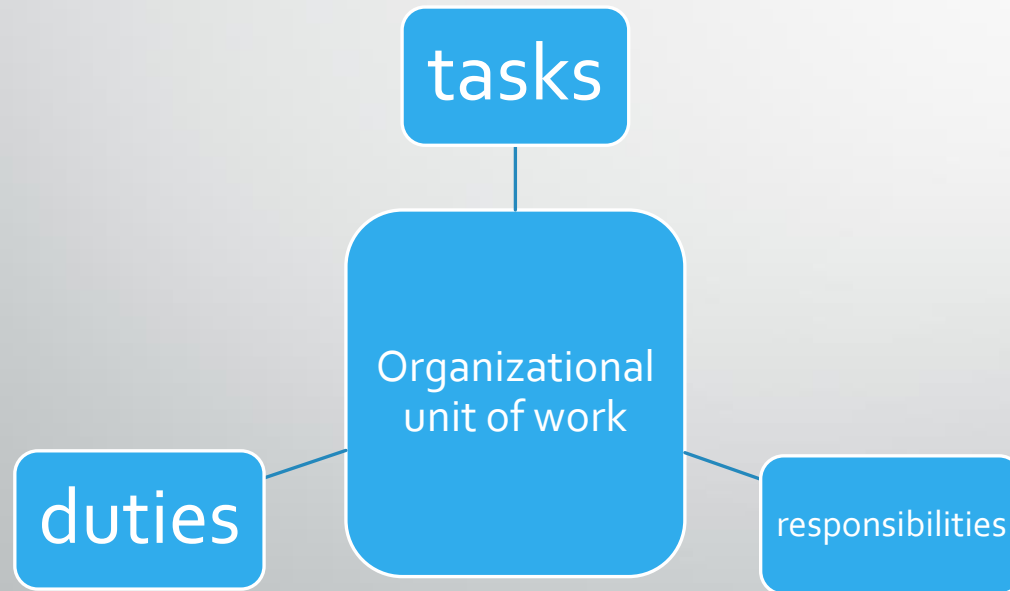

Job Design

- Job design is creation of jobs which individuals in the organization have to perform.

What is a Job?

- Jobs are basic building blocks of the organization

Task - is a series of motion and is a distinct identifiable small activity.

Duty - is a series of tasks and is a large work segment.

Responsibility - is the obligation of performing the entrusted tasks and duties successfully. ^{bedeema}

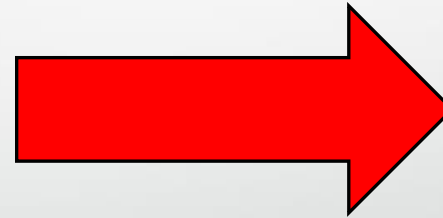

Task, Duty & Responsibility

Job	Task	Duty	Responsibility
University Senior Lecturer	•Talking •Writing •Observation •Asking question from the students •Giving answers for the questions raised by the students •Preparing lecture notes	Delivering lectures	Performing the entrusted task and duties successfully

Job Design and its Direct Impact

Job design

- Contents
 - Tools and techniques
 - Surroundings of the work
 - Relationship of one job to other job

Employee efficiency

Employee effectiveness

Employee productivity

Employee satisfaction

Employee training and
development

Employee health and safety

Characteristics of a job

Three fundamental characteristics shared by all jobs:

- Job range – the number of operations a job holder performs to complete a task.
- Job depth – the number of discretion a job holder has to decide job activities and job outcomes. Abhimathaya
- Job relationships – the interpersonal relationships between job holders and their managers and co-workers.

-Armstrong's Handbook of Human Resource Management- Michael Armstrong

Methods/ Techniques of job design

- Scientific Technique
- Job Enlargement
- Job Enrichment
- Job Rotation
- Professional Techniques
- Group Techniques

Scientific Technique

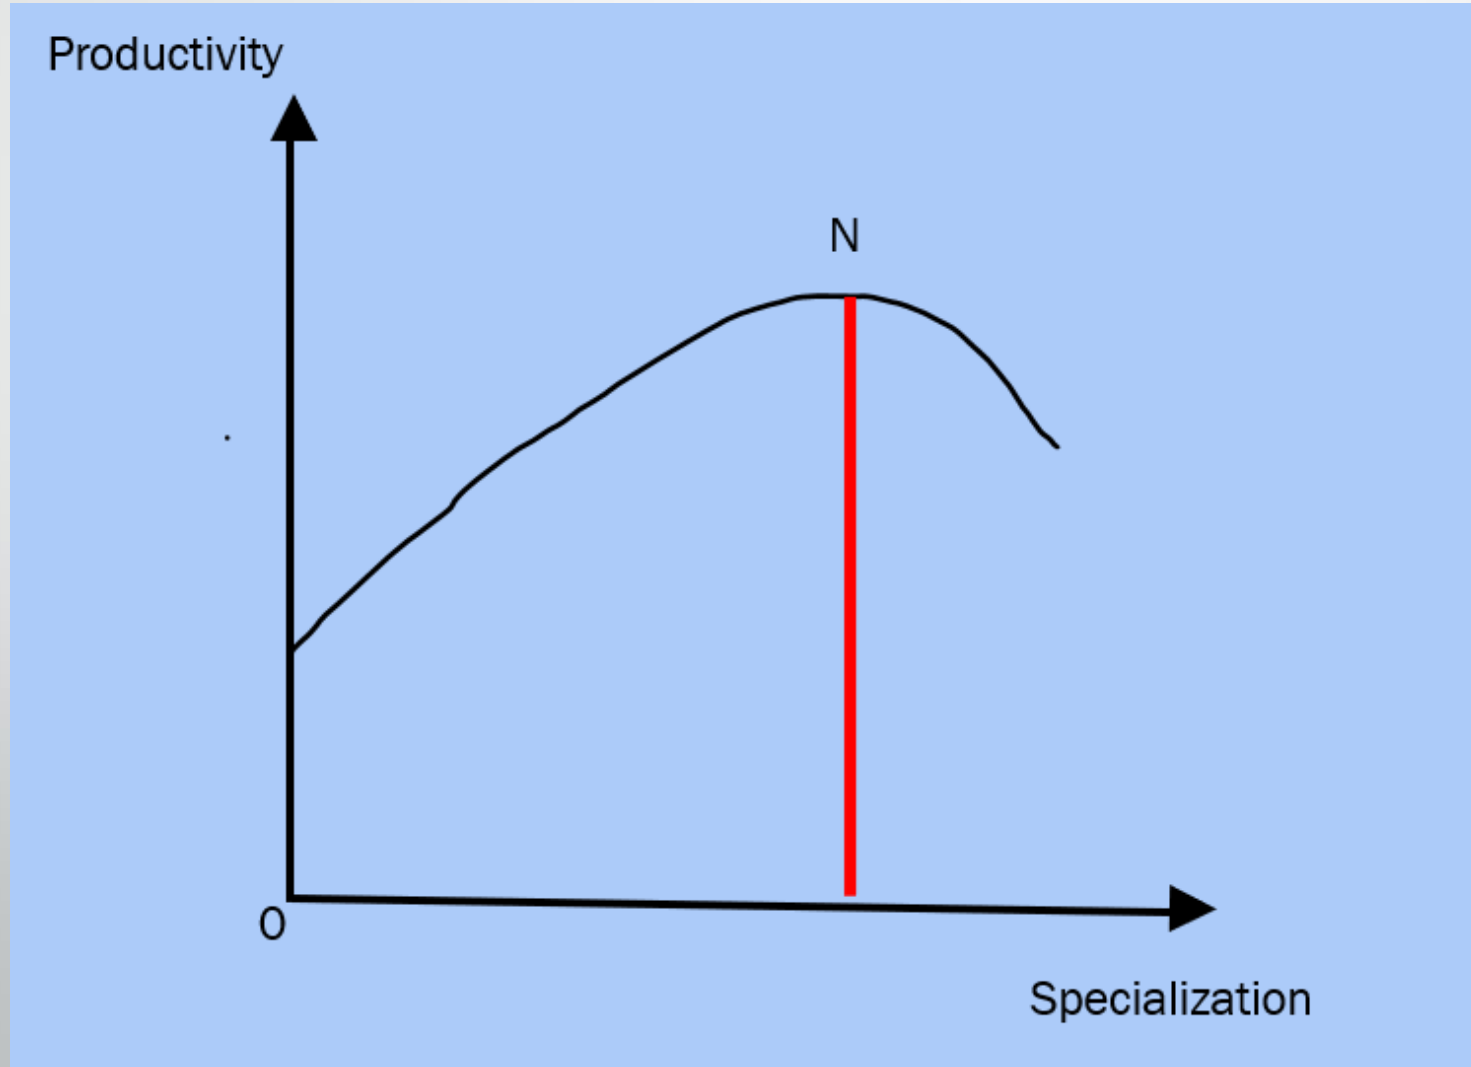

- Objective - to maximize the organizational productivity by maximizing employee efficiency.
- Under this method a job is created by grouping very limited parts together.
- This results in a more specialized job that has a shorter job cycle, which is the required time to complete every duty in the job for once.
- Under this technique, job design considers the total work for achieving a certain objective and divides it into distinct small parts.
- These distinct parts can be identified as ***duties***.
- A ***job*** is created by grouping a limited number of small parts.
- A job consists of a limited number of duties.
- This result in a more ***specialized job***.
- In fact, scientific technique focuses on specialization and attempts to gain advantages of specialization.
- Generally a specialized job has a short ***job cycle***.
- Job cycle is defined as the required time to complete every duty in the job for one time.

Scientific Technique

Cont.....

Job	Duties	Time required	Job cycle
Headlight installer in an automobile company	Pick up the bulb	30 seconds	02 minutes
	Plug the bulb in to the receptacle	30 seconds	
	Fix it	60 seconds	
University lecturer	Deliver lectures	03 months	05 months
	Hold examinations	02 weeks	
	Evaluate	02 weeks	
	Other work	04 weeks	

Productivity vs. Job Specialization

Advantages & Disadvantages of Job Specialization

Advantages

- Speed of doing work increases
- Employee's motions and fatigue are minimized
- Use of machines, tools and equipment are facilitated; economized
- Time in learning the job reduces
- Wastage goes down
- Quality of output increases
- Quantity of output increases
- Cost per unit decreases

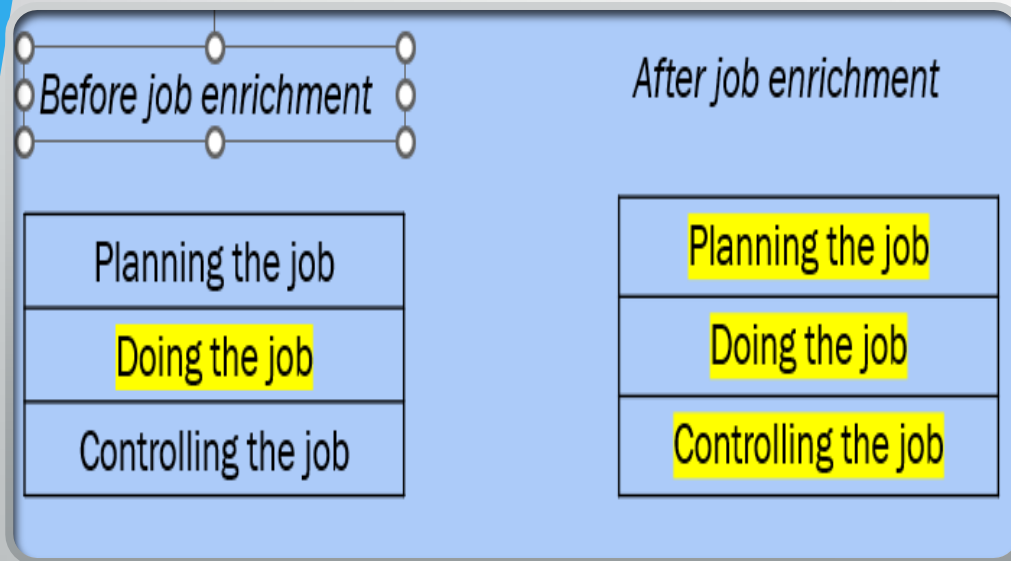

Disadvantages

- Monotony
- Boredom
- Fatigue
- Dissatisfaction
- Not knowing the whole process

Job Enlargement

- Increasing the scope of a job by including a new related duty/duties in addition to the current duties involved is job enlargement.
- Giving the employee more tasks to perform.

Job Enrichment

- Increasing the depth of a job by expanding authority and responsibility for planning, doing and controlling the job is job enrichment.
- Increasing both the number of tasks the worker does and the control the worker has over the job.

Job Rotation

- Job rotation is shifting an employee from one particular job to another without limiting the employee to do a particular job only.
- Systematically moving employees from one job to another.

Professional Techniques

- Designing job according to a certain accepted profession is professional technique.
- Some jobs in an organization can be designed so that professionals such as accountants, physicians, engineers and lawyers are employed.
- They often do not require much direct supervision in getting the professional work done because they are competent enough to perform all duties of the profession successfully.
- They require less direct supervision and therefore they design the jobs themselves.

Group Techniques

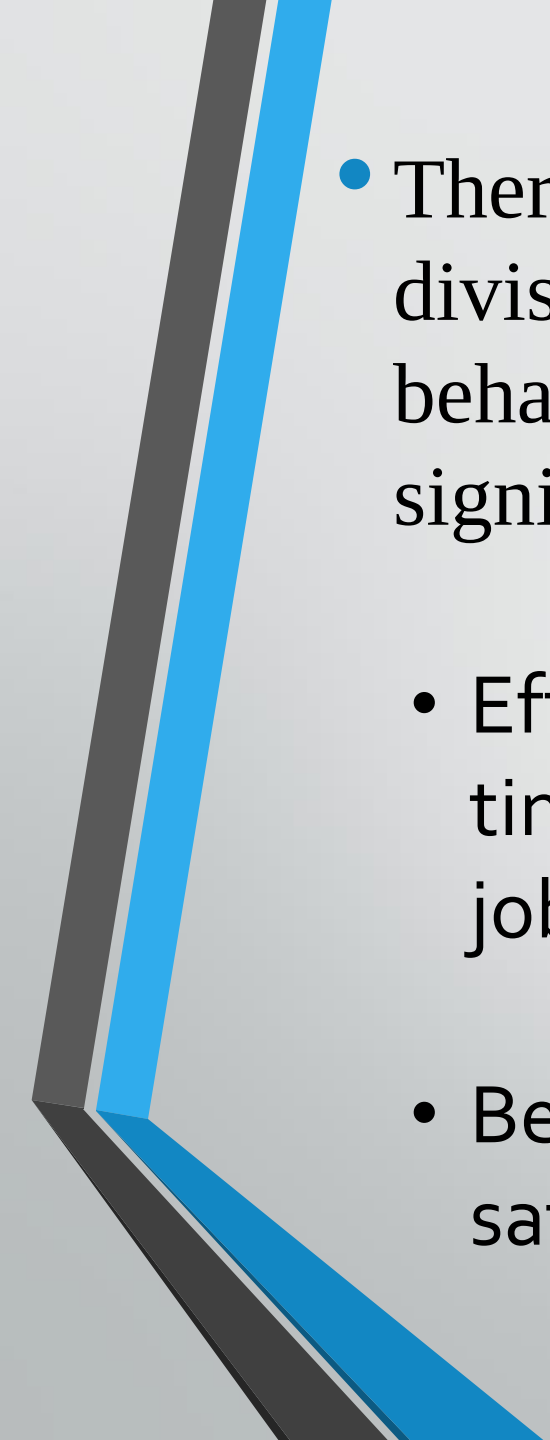

- Job is designed so that a group of individuals can perform it.
- Result is a collective job rather than an individual job.
- Alternatively called Team contemporary approach or team working method.

The Relationship between Productivity and Specialization

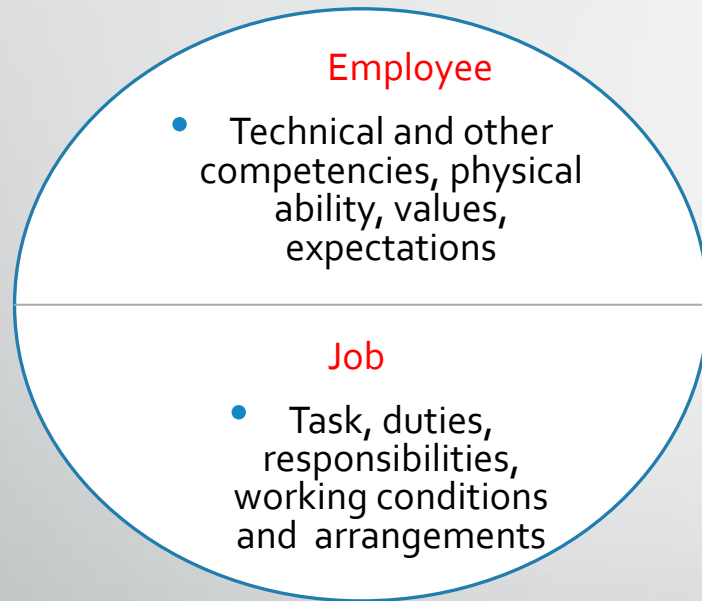

- Productivity increases up to a certain point owing to the advantages of specialization.
 - i.e. up to a certain point there is a positive relationship between productivity and specialization.
 - Increased/ additional specialization means increased productivity up to a certain point.
- If the job is made specialized further, productivity tends to decline.
 - **Due to the disadvantages of specialization, after a certain point, if degree of specialization is increased further, then degree of productivity declines.**
 - i.e: the job becomes overspecialized and then it will result in boredom, monotony, fatigue, not understanding the whole work of the organization, the employee will have to work as a machine and resultant error.

Purpose of Job Design

- The primary objective is to achieve organizational success and progress of success.
- Therefore, jobs should be designed
 - To make the job productive
 - To make the job satisfy

- 
- There should be a trade- off between efficiency elements (division of labour, standardization, specialization) and behavioral elements (skill variety, task identity, task significance, autonomy, feedback)
 - Efficiency elements- Elements which leads to minimize time, effort, and cost which need to perform a particular job
 - Behavioral elements – elements which lead to employee satisfaction

Employee / Job Fit Concept

If there is a mismatch:

- Change the employee
- Giving a special training
- Employee can be replaced
- Re-design the job (job rotation, job enlargement, job enrichment)

Process of Job design

- Process of work arrangement / re-arrangement.
- Create the job satisfaction/ overcome job dissatisfaction of employees.
- Specify contents, methods and relationships of jobs.
- Making optimize use of job/work-time.
- Job design starts with an analysis of task requirements, using the job analysis techniques.

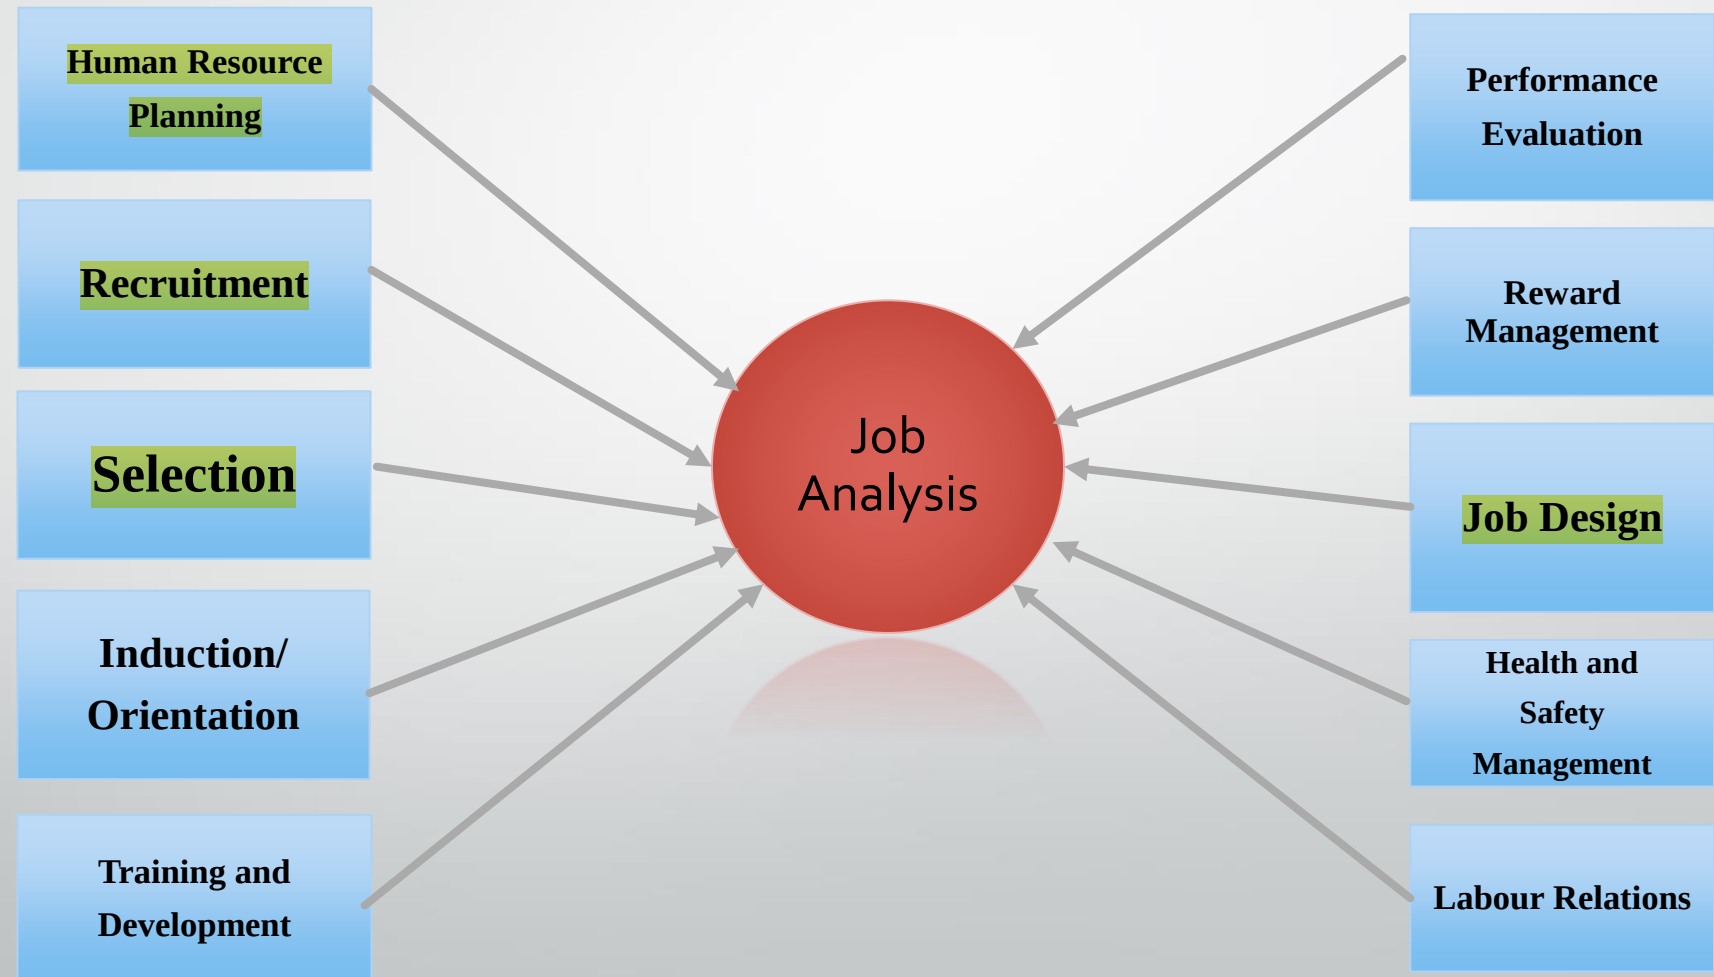

Job analysis

- The procedure for determining the duties and skill requirements of a job and the kind of person who should be hired for it.
- G. Dessler - Human Resource Management
- Job Analysis is a systematic investigation of job and job holder characteristics to create a collection of information that can be used to perform various HRM functions.

-H.H.D.N.P. Opatha

Significance of Job Analysis

Due to the impact on:

Job Analysis Process

Acquire general familiarity with the organization

Identify and select job(s) to be analyzed

Develop JA checklist

Collect data

Apply JA data

Evaluate JA effort & feedback

Job Analysis checklist

- **Job identification data**
- **Duties and responsibilities**
- **Human characteristics**
- **Working conditions**
- **Health and safety conditions**
- **Performance standards**
- **Other job-related features**

Methods of Data Collection

- **Observation**
- **Participation**
- **Questionnaire**
- **Employee log (Diary)**
- **Interviews**
- **Jury of experts (Technical conference)**

Apply JA data

- Determine the human resource requirements of the job, its specific duties and responsibilities.
- Direct to develop;
 - Job descriptions
 - Job specifications

Components of job analysis

- Using this set of data two major documents about the jobs are prepared
- Job Description
 - A written statement
 - A list of job's duties, responsibilities, reporting relationships, and supervisory responsibilities.
- Job Specification
 - A list of job's "human requirements" that is the requisite education, skills, personality, and etc.
 - Those are the personal qualities, traits, skills and background required to preform the job.

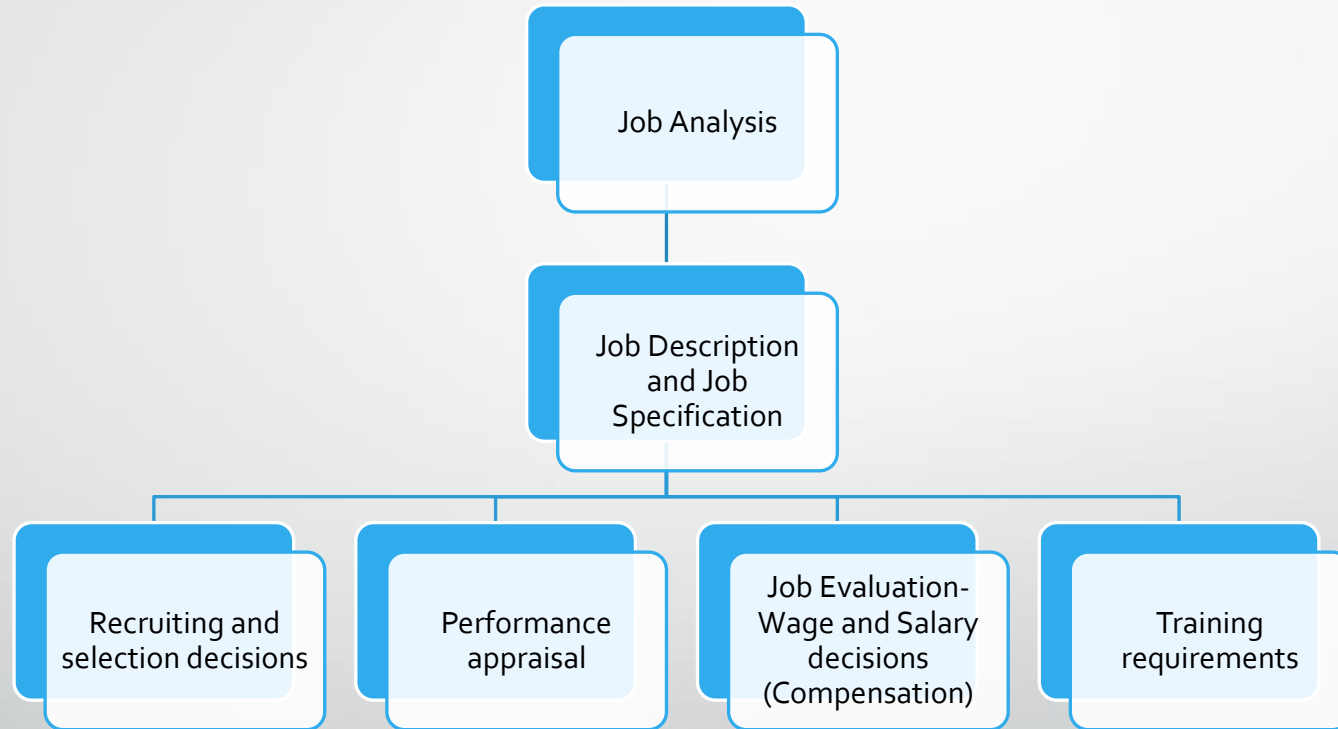

(2) JOB DESCRIPTION OF ASST. LIBRARIAN - INFORMATION SECTION

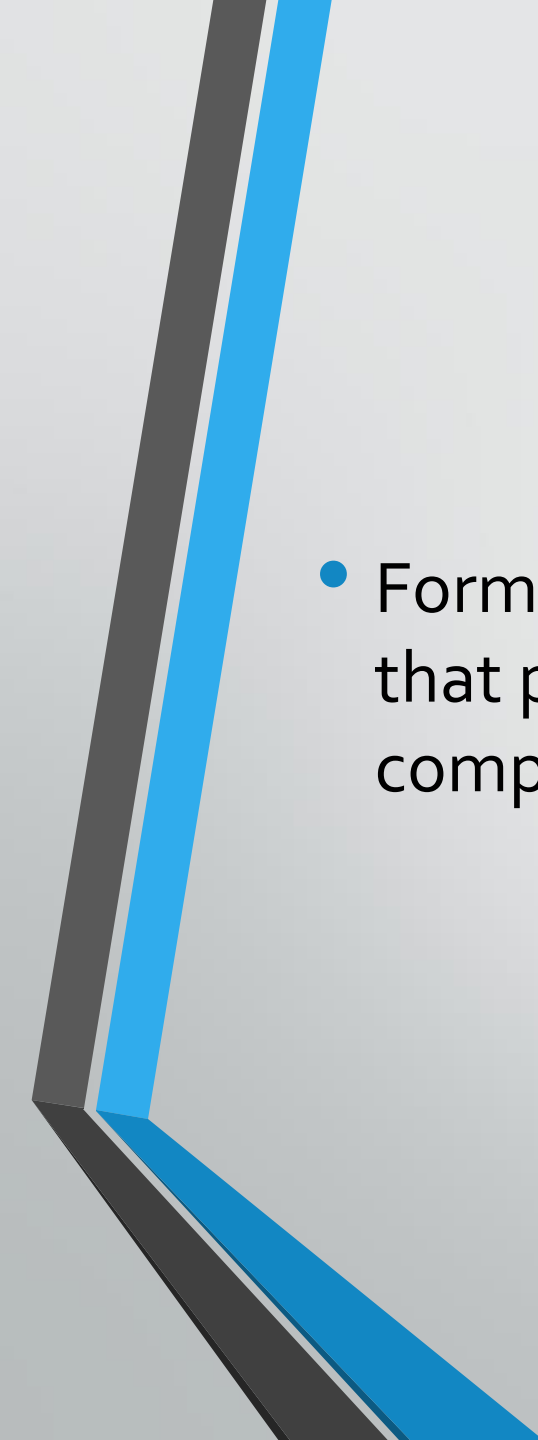

Job Title	▶ Asst. Librarian – Information Section
Class Title	▶ Assistant Librarian
Reports to	▶ Librarian / Head – Reference Section
Supervises	▶ Information Assistant, Library Assistant
Summary	▶ Asst. Librarian - Information Section directs the provision of reference and information services and supervises information
Qualifications	▶ He should be acquainted with developments and trends in the field of reference and information services. ▶ He should be service oriented and helpful by nature. He should be familiar with resources, knowledgeable and possess experience. ▶ He should be M.Sc. OR B.Lib.Sc. with 55% marks
Duties	▶ Establishes and plans information services. Establishes and plans user education programme. ▶ Develops and administers policies pertaining to services and staff ▶ Assist the users in the use of catalogue ▶ Assist the users in the location of materials ▶ Receives book requests; edits and compiles the forms with additional bibliographic information ▶ Answer telephone calls ▶ Provides ready reference service ▶ Gives directional information ▶ Screens information requests for long range reference service ▶ Overall supervision of the section ▶ Receives and responds to serious complaints from users and staff ▶ Provides user education ▶ Prepares, reports and statistics ▶ Attends conferences and meetings ▶ Supervises work of other staff in the section ▶ Prepares section budget; reviews and reports on budget periodically ▶ Assists and recommends to the librarians about policies and produces relating to the section ▶ Selects reference books
Salary	▶ Rs.14000-18000

(1) JOB SPECIFICATION OF ASSISTANT LIBRARIAN

Job Title	▶ Assistant Librarian
Qualification	▶ Master Degree in Library & Information Science with atleast 55% marks
Experience	▶ Minimum 2 years experience in reputed Library in education field
Special attributes	▶ Well versed in computerized environment like MS Word, Acrobat Writer, familiar with Lotus Notes
I	▶ Good interpersonal skills and communicational skills
Physical attributes	▶ Should have good physique with minimum height 165 cms and weight 65 kgs.
Job Profiles	▶ Looks after overall functioning of the library ▶ Establishes and plans information services. ▶ Establishes and plans user education programme. ▶ Develops and administers policies pertaining to services and staff ▶ Monitors and develops on-going services. ▶ Looks after circulation services ▶ Manage PHL Libraries ▶ Circulate Library updates ▶ Provide reference to staff ▶ Assists Librarian in the location of materials and for compilation of Bibliographies ▶ Maintenance of issue records, charging and discharging books ▶ Accessioning of books, registration of Periodicals ▶ Inter-Library Loan work ▶ Shelving of books and periodicals
Reporting to	▶ Librarian

Use of Job Analysis

Strategic Human Resource Management

- Formulating and executing human resource policies and practices that produce the employee competencies and behaviors the company needs to achieve its strategic aims.

- G. Dessler - Human Resource Management

Human Resource Planning

- Part of the planning process.
- Personnel plan.
- Anything a company does , or plan to do requires human resources.

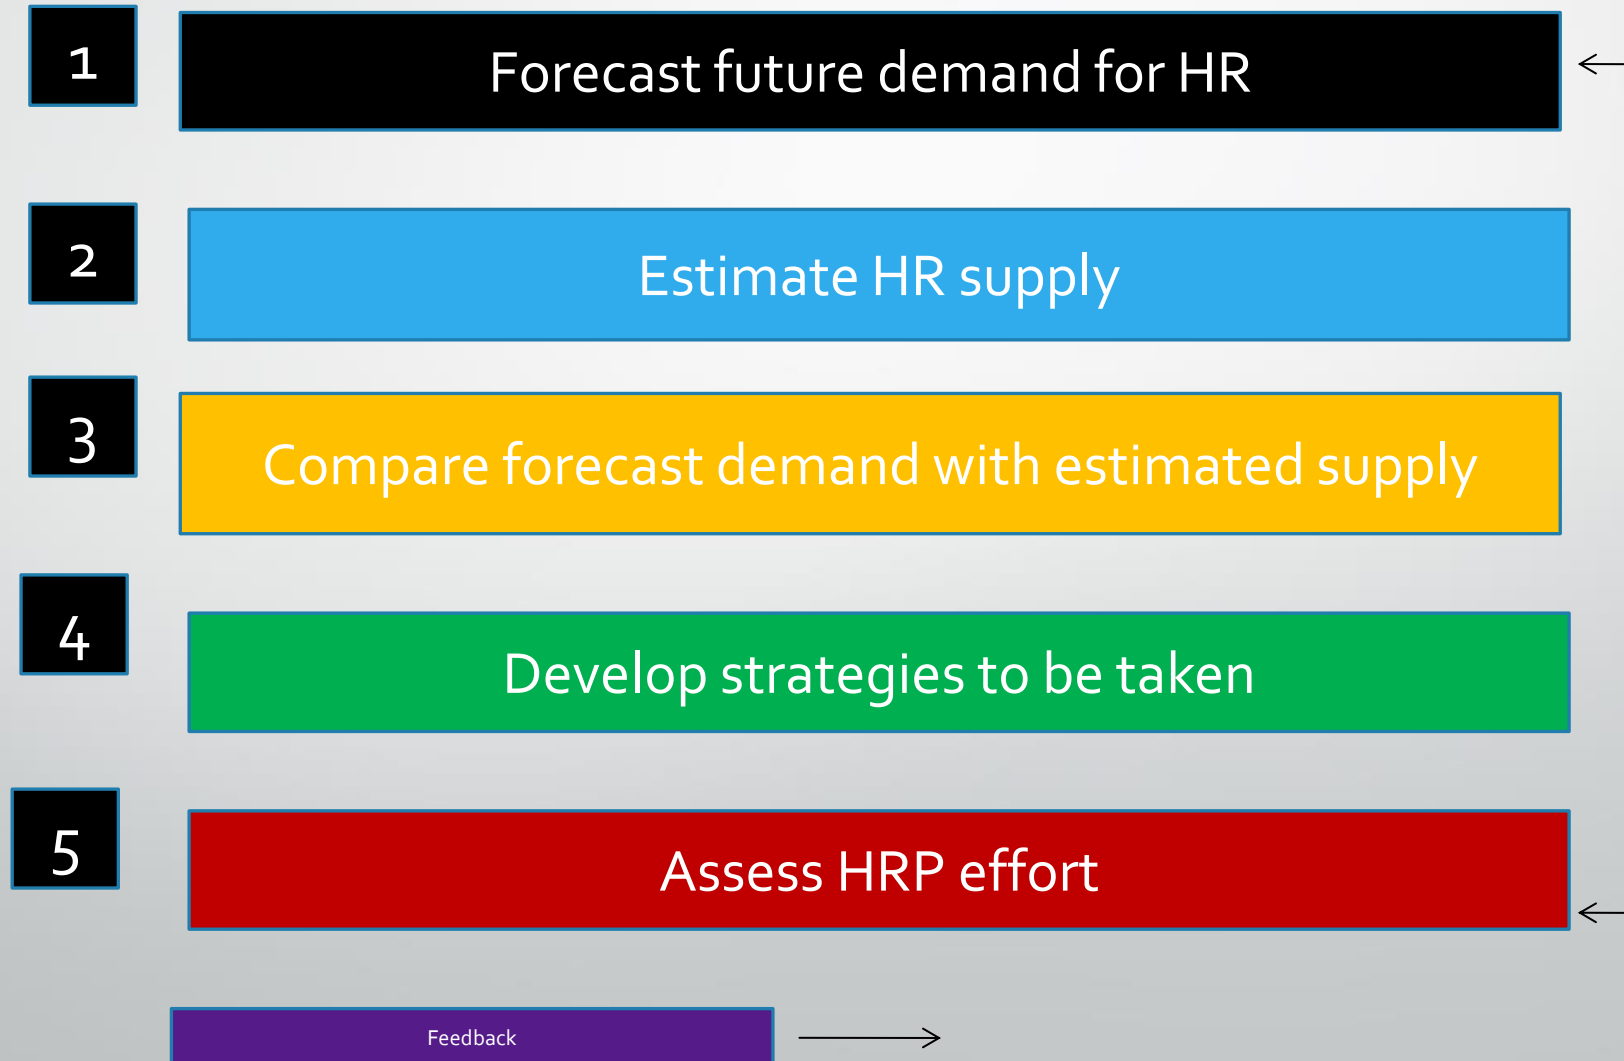

i.e managers or other personnel

Human Resource Planning

Cont.....

- Human resource planning is the process of determining future employees needs and deciding steps or strategies to achieve those needs for the purpose of accomplishing organizational goals and objectives.
- Objective - To ensure the best fit between employees and jobs, while avoiding manpower shortages and surpluses.

HRP Process

Importance of HRP

- To determine future employee needs (employee demand)
- To utilize human resources more efficiently and effectively.
- To control employee cost.
- To develop highly competent managerial and professional employees.
- To formulate and implement strategic plans

Forecast Future Demand For Human Resource

- This involves estimating the types and number of employees needed for the future.
- **Factors affecting future demand for HR**
 - Demand for the product
 - Goals and strategic plans of the organization
 - Production methods
 - Retirements
 - Resignations
 - Deaths
 - Leave of absence
 - Termination
 - External factors

Strategies That Can Be Taken In Surplus Conditions

- Stopping of hiring new employees
- Voluntary departure
- Early retirement on voluntary basis
- Temporary stoppage of employee service
- Expansion of business activities
- Stoppage of working overtime

Strategies That Can Be Taken In Shortage Conditions

- Have current employees work over time
- Subcontract work to other firms
- Job enlargement
- Capital substitution
- Higher part time and casual employees

Thank you!
