

Ethics for Technologists

TCS3121

Dr.V.H.P.Vitharana
Senior Lecturer

Department of Engineering Technology
Faculty of Technology
University of Ruhuna

Course Content

1. Introduction to codes of ethics
2. Responsible Technologist
3. Honest, Integrity and reliability
4. Risk , safety and Liability in Engineering technology
5. Technologist as Employees
6. Technologist and the Environment
7. Technical Professionalism and Ethics
8. Law and Ethics

Role of a Technologists

ROLE	SKILLS	ACTION/DELIVERABLES
Communicator	Ability to translate technology concepts in non-technical language to project stakeholders	Bring key issue to the attention of stakeholders at each phase of the project (design, programming, implementation)
Technology Advocate	Ability to present vision and inspire enthusiasm for the technology and what it can do in the space	Presentations to key audiences; provide specific documentation related to solutions (services, costs and staffing)
Futurist	Ability to look at emerging technology trends and apply them to the specific domain	Presentations to key audiences

Role of a Technologists

ROLE	SKILLS	ACTION/DELIVERABLES
Strategist	Ability to identify potential solutions and select the best path forward for the overall project from the technology perspective	Build the technology vision asks: what is unique on campus and how can the library support? engage partners to design high-level solutions; prepare technology plan for project
Researcher /Tester	Ability to research new technologies and their applicability to project needs	Prototype and do desk research to support technology related decisions throughout the project
Implementer	Project management; resource and personnel management	Engage with consultants and integrators to ensure that the functions as designed are implemented in the technology in the spaces

What are ethics?

- **Ethics** is the code of moral principles and values that governs the behaviors of a person or group with respect to what is right & wrong
- **Ethics** sets standards as to what is good or bad in conduct and decision making
- An ethical issue is present in a situation when the actions of a person or organization may harm or benefit others

Introduction to codes of ethics

- A Code of Ethics is a written collection of principles, values, standards, behavior, and relationships that an organization considers significant and believes are fundamental to its successful operation.
- The Code of Ethics enumerates those standards and values that make an organization remarkable and that enable it to stand out from similar organizations.
- It is adopted by an organization to reflect the system that is present in the organization.

Importance of codes of ethics

- It clearly lays out the rules for behavior and provides the groundwork for a preemptive warning.
- Regardless of size, businesses count on their management staff to set a standard of ethical conduct for other employees to follow.
- When administrators adhere to the code of ethics, it sends a message that universal compliance is expected of every employee.

Some Engineering Codes of Ethics/Conduct

- The Institution of Engineers Sri Lanka (IESL)
- The Institution of Incorporated Engineers Sri Lanka (IIESL)
- Institute of Electrical & Electronics Engineers (IEEE)
- European Federation of National Engineering Associations (FEANI)
- American Society of Civil Engineers (ASCE)
- National Society of Professional Engineers (NSPE)
