

The background of the slide is a 3D grid of white cubes. One cube, located in the upper right quadrant, is red and stands slightly higher than the others, creating a focal point. A red semi-transparent rounded rectangle is positioned on the left side of the slide, containing the title and author information in white text.

Object Oriented Analysis and Design ICT2132

Chanduni Gamage
Dept. of ICT
Faculty of Technology
University of Ruhuna

A 3D perspective view of a grid of white cubes. One cube in the upper right quadrant is colored red, standing out from the rest of the white cubes. The text "COURSE UNIT OBJECTIVES" is centered in the middle of the image.

COURSE UNIT OBJECTIVES

A red cube is positioned on a grid of white cubes. The red cube is in the lower-left foreground, slightly offset from the grid. The white cubes form a larger grid that recedes into the background.

After successful completion of this course unit, students should be able to,

- Describe fundamental concepts of object orientation and justification for the object-oriented approach.
- Discuss how UML is used to represent different views in the object-oriented systems development process.
- Construct appropriate diagrams following dynamic and static modeling

COURSE STRUCTURE & EVALUATION

A decorative graphic on the left side of the slide. It features a red, three-dimensional cube with a glossy finish, positioned on a grid of light gray squares. The grid extends from the bottom left towards the center of the slide, creating a sense of depth.

➤ Total credits - 02

➤ Lecture Hours - 30

➤ Evaluation

- End semester examination - 70%
- Continuous assessments - 30%

EVALUATION

Method of Assessment

- Theory exam: 70%
- Continuous assessment: Quizzes: 10%, Assignments 20%

Theory exam: 70%

- Minimum attendance for theory should be 80% to sit for the examination
- Structure of the paper - 4 questions, Answer all questions
- Duration - 2 hrs.

Quizzes: 10%

- 3 quizzes

Assessment 20%

- 2 Individual Assignments

LEARNING OUTCOMES

- Describe fundamental concepts of object-orientation.
- Describe the justification for object oriented approach.
- Discuss importance in modeling and explain how UML is used to represent different views in object-oriented systems development process.
- Develop and use activity diagrams.
- Explain how to develop use cases and use case diagrams to document requirements.
- Use and explain UML class diagrams: a detailed model of user requirements.
- Use use cases with communication/sequence diagrams and class diagrams.

COURSE CONTENT

- **Fundamental concepts in object orientation**
- **UML Modelling**
- **Software development process**
 - Process Models
- **Requirements and Use cases**
 - Business and system use cases
 - Documenting requirements by using use cases
 - Brief and fully dressed formats in use case modelling
 - Use case diagram and notations
 - Activity diagram
- **Modelling structure**
 - Class diagrams
- **Modelling behaviour**
 - Interaction diagrams
 - Communication and sequence diagrams.
- **Use case realization**

REFERENCES

- **Object-oriented analysis and design using UML, Simon Bennet et al.**
- **Applying UML and patterns : An introduction to Object Oriented Analysis and Design and the Unified Process.**

IMPORTANT

- 
- A red cube is positioned on a grid of white cubes, which is set against a light gray background. The red cube is the focal point, standing out from the uniform white grid.
- **80% Attendance for lectures is compulsory to sit for the end examination.**
 - **A minimum 50% should be maintained to pass continuous assessment component.**

THANK YOU!
